Projects

Slipakar: Self-hostable platform for personalized bulk email payslip

Slipakar is an open-source, self-hostable platform for personalized bulk email. It lets a company send messages through its own SMTP server and optionally attach a personalized PDF, such as an employee payslip, to each recipient

https://slipakar.akarun.site | https://github.com/dxxta/slipakar

Byecheating: Real-time Exam Integrity Platform For Cheating Detection

Integrated REST API with a cheating detection model (YOLOv5) through RTSP protocol.

https://docs-bye-cheating.web.app | https://github.com/dxxta/Cheating-Detection-API

FundConn: Web3 Crowdfunding Platform Based on Ethereum

Management system for event organizers' funding using blockchain technologies.

https://github.com/dxxta/fundconn

Edusign: American Sign Language App

Mobile application designed to facilitate the learning and practice of American Sign Language (ASL) through the integration of machine learning technology.

ColorSorter: Integrated Real-time IoT System with Telegram Bot

An integrated system that delivers real-time alerts for IoT gadgets and functions as a color sorter.

https://docs-color-sorter.web.app | https://github.com/dxxta/Color-Sorter-IoT-Telegram

LombokHalalRoom: Halal Tourism Platform

Web application using integrated RESTful API and payment gateway for Lombok Halal Room as platform used for halal tourism.

Web Application ReseleryFood

Passionate about creating simple and efficient front and back-end solutions to enhance user experiences.

KitaRescue REST API

Contributing to the development of Kita Rescue as Backend Developer for the Software Development category in GEMASTIKXV competition by Puspresnas.
